About the job

eClerx Technology organization is looking software developer who specialize in .NET Core or C# programming with additional strong skills in database development and unit testing methodologies. The candidate should be familiar with a distributed, containerized architecture from a design, development and DevOps perspective.

The team works in a fast-paced, challenging environment, highly agile with other senior technology engineers, testers and business analysts. The person must be able to work independently while coordinating with a team that will be located around the globe. This presents an excellent opportunity to learn and grow as a software developer in the investment management industry.

Responsibilities

- Analysing and interpreting requirements from architecture and the business analysis teams
- Responsible for developing and implementing user interface components, middleware or server/database side as needed
- Designing and building efficient, well tested, and reusable code
- Ensuring responsiveness of applications
- Troubleshooting interface software and debugging application code
- Monitoring and improving application performance

Eligibility Requirements

- Knowledge of performance testing frameworks
- Excellent troubleshooting skills
- Hands-on .NET Core / C# skills required
- Proficient in SQL for SQL Server and/or PostgreSQL
- Demonstrable experience in Unit Test design and implementation
- Knowledgeable in Object-oriented design (OOD) techniques
- Familiar with DevOps practices
- Demonstrable experience with Kafka / micro-service architecture, etc.
- Knowledge and experience working with AWS technologies such as EC2, SQS, Aurora, EKS
